

Rationale:

- Evaluate presently-growing apple cultivars in Vermont for cidermaking characteristics
 - Primarily common dessert fruit
- Highlight different characteristics of specialty cider apple cultivars presently in limited supply
- Develop baseline cidermaking and evaluation protocols
- Involve cideries, growers, and researchers in transdisciplinary research

Cidermaking:

- All juice (unless noted) from same pressing on 10/29 at Happy Valley Orchard
- Fruit collected from VT Orchards, yield and tree vigor data collected
- Juice analyzed in UVM juice testing lab
-

Evaluation:

- Not a drinking session, 30+ samples to get through!
- Hedonic scale 1-5 for:
 - Appearance, Aroma, Sweetness, Acidity, Mouthfeel, Flavor
- Sampling:
 - Look 1 = Strongly Dislike
 - Smell 2 = Dislike
 - Sip 3 = Neutral
 - 'Chew' 4 = Like
 - Spit/swallow 5 = Strongly Like
