

## SALAMANDER POPULATION STUDY

The techniques used at the Holt Research Forest to assess salamander populations have changed significantly over the course of the study. Because we feel that the techniques we no longer use

may be both useful in understanding why we do what we do now and also may be of value at other research stations, we have included

them here with a discussion of our experience.

Following are three sets of instructions: "Salamander Shingle Set-up Instructions," "Salamander Shingle Station Instructions," and "Salamander Censusing Instructions." The first two involving shingles detail our current methods. The third includes both strip
