

Vermont Vegetable and Berry News – March 3, 2015

No signs of any diseases this winter and we feel the hot-water treating of seeds has helped a lot with that. We are hot-water treating all our spinach, parsley and Brassicas now for the spring plantings and the greenhouse is getting filled up with lots of seedlings that started in mid-January. Trying to complete an addition for our washing station so hoping the ground thaws for the final cement pour soon.

TECH TIP

Here's a good article on organic greenhouse fertilizers by Dr. Doug Cox, UMass Extension:
