(Norwich) Dry is the word. I chisel plowed a new half-acre field last week and the clods of dirt are now baking in the sun. Hoping to get a little rain to soften them up before attacking them with the disc harrow and rotovator. Seeds are amazingly resilient though, and spinach, carrots, beets, peas, turnips and arugula are finding their way through the crust. Piglets arrive yesterday and immediately went to work tilling up another new piece of land. After hours on the tractor

Seeded to date: radish, beets, turnip, peas, carrots, Swiss chard, green beans. Transplanted:

(Weare NH) As with everyone else, the unseasonable dryness is adding to the spring work load
